- It will help you in your diagnostic when scan tool diagnosis ends. Sensors, injectors, actuators will inform the scan tools that there is a problem, but the sensor simulator will allow the technician to know if the faulty operation is a faulty sensor, a problem in the car computer, a defect in the wiring...
- The device is specially used for wiring tests.

HU31035

AIRBAG SIMULATOR RESISTOR RESET KIT

NEW

- Universal airbag resistor kit
- These simulators are intended for diagnostic use only
- Plugging them in place of the components listed below will make the SRS ECU (computer) believe the component is connected:
 - Steering wheel airbag
 - Passenger dash airbag
 - Curtain airbag
 - Side airbag
 - Seat belt pretensioners
 - Any other component of the SRS System with an inflator
- Using these with the proper resistance allows for testing the SRS system after a crash, making sure the system is fine BEFORE changing costly components.
- Changing the ECU without testing the system implies a risk of locking the ECU.
- In case of SRS/Airbag dash light, it enables to diagnose a faulty airbag. Simply plug the sticks in place of the airbag and check if the light switches off.
- Most competition kits only have 1 resistance of 2.5ohms. Our kit has 4 plugs with multiple interchangeable resistors to always simulate the airbags/pretensioners with the proper resistance.
